JOURNAL: Cancer Research 57 (7):p1329-1334 1997

ISSN: 0008-5472

RECORD TYPE: Abstract

LANGUAGE: English

ABSTRACT: Endogenous murine angiostatin, identified as an internal fragment of plasminogen, blocks neovascularization and growth of experimental primary and metastatic tumors in vivo. A recombinant protein comprising *kringles* 1-4 of human plasminogen (amino acids 93-470) expressed in *Pichia pastoris* had physical properties (molecular size, binding to lysine, reactivity with antibody to *kringles* 1-3) that mimicked native angiostatin. This recombinant Angiostatin protein inhibited the proliferation of bovine capillary endothelial cells in vitro. Systemic administration or recombinant Angiostatin protein at doses of 1.5 mg/kg suppressed the growth of Lewis lung carcinoma-low metastatic phenotype metastases in C57BL/6 mice by greater than 90%; administration of the recombinant protein at doses of 100 mg/kg also suppressed the growth of primary Lewis lung carcinoma-low metastatic phenotype tumors. These

findings demonstrate unambiguously that the *antiangiogenic* and antitumor activity of endogenous angiostatin resides within *kringles* 1-4 of plasminogen.

Metabolism of rabbit angiostatin glycoforms I and II in rabbits:

Angiostatin-I leaves the intravascular space faster and appears to have greater anti-angiogenic activity than angiostatin-II.

SUMMARY LANGUAGE: English

ABSTRACT: Plasminogen (PLG) exists in the circulation as two glycoforms, I and II. Angiostatin (AST) is a polypeptide that has been cleaved from the *kringle* region of PLG and has strong anti-angiogenic properties. AST-I and AST-II, which consisted only of *kringles* 1 through 3, were prepared by the action of urokinase on purified rabbit PLG-I and PLG-II, respectively, in the presence of N-acetyl cysteine, followed by affinity chromatography on lysine-Sepharose. Purified AST-I and AST-II were tested for functional activity with a chick chorioallantoic membrane (CAM) model; when similar amounts were applied to a 6-day CAM, AST-I was substantially more effective than AST-II in decreasing vascular supply to the CAM over a 72-hour period; this activity correlated with a loss of capillaries, probably through apoptosis of endothelial cells. Radiolabeled AST-I and AST-II (iodine 125 and iodine 131) were co-injected intravenously into healthy rabbits to determine their clearances from plasma measured over 3 days. Over a dose range of 0.08 to 2.7 mug/kg, the fractional catabolic rate within the intravascular space (j3) indicated that AST-I was cleared 3-fold to 4-fold more rapidly than AST-II (P < .001). The catabolic half-life of AST-I (2.01 +- 0.19 days) was significantly less than that of AST-II (2.62 +- 0.20 days). The faster clearance of AST-I from the intravascular space was matched by its more rapid passage than AST-II to the extravascular space of various organs over 60 minutes in vivo. This property of AST-I as compared with AST-II may partially explain its greater anti-angiogenic potential. From the plasma concentrations of PLG-I and PLG-II and their relative behaviors toward rabbit VX-2 lung tumors in vivo, we predict that substantially greater quantities of AST-II than AST-I may be released into the extravascular space of tumors.

Disruption of interkringle disulfide bond of plasminogen *kringle* 1-3 changes the lysine binding capability of *kringle* 2, but not its antiangiogenic activity.

RECORD TYPE: Abstract

LANGUAGE: English

SUMMARY LANGUAGE: English

ABSTRACT: *Kringle* 1-3 of human plasminogen is a potent inhibitor of endothelial cell proliferation. To understand a possible role for the unique cystine bridge between *kringle* 2 and *kringle* 3, we disrupted the interkringle disulfide bond by mutating Cys169 and Cys297 to serine residues. The yield of the mutant during the refolding process was decreased significantly. Anti-endothelial cell proliferative activity of the mutant was similar to that of the wild type. There was no significant difference in in vivo antiangiogenic activity between the wild type and the mutant in chorioallantoic membrane assay. However, in the mutant, the weak lysine binding capability of *kringle* 2 was not detected and its mobility in nonreducing sodium dodecyl sulfate-polyacrylamide gel electrophoresis is different from that of the wild type. These results support the notion that the overall antiangiogenic function of angiostatin is mediated by individual *kringles*, and suggest that the lysine binding capability of *kringle* 2 is likely not important for the antiangiogenic activity of *kringle* 1-3.

080158 CBA Acc. No.: 14-00003189 DOC. TYPE: Patent

A method for the preparation of interferons.

AUTHOR: Bar-Shalom, D.; Shing, Y.; *Folkman, J.*

CORPORATE SOURCE: Bukh Meditec A/S; Children's Medical Center Corp.,
DK-3500 Vaerlose; Boston, MA 02115, Denmark; USA

CODEN: PIXXD2

PATENT NUMBER: WO 9428020

PATENT APPLICATION: US 08 (930518)

PUBLICATION DATE: 8 Dec 1994 (941208) LANGUAGE: English

ABSTRACT: A method is disclosed for preparing interferons using sucrose octasulfate. Addition of sucrose octasulfate to interferon-containing solutions results in precipitation of interferons as water-insoluble adducts that retain interferon activity. The adducts are highly stable and can be used directly as pharmaceutical compositions for the treatment infectious and inflammatory disease and neoplastic and proliferative disorders.

DESCRIPTORS: interferon; precipitation; downstream processing; sucrose octasulfate; protein purification; disease therapy; pharmaceutical production

Bi-affinity chromatography of compounds which have an affinity for two or more ligands.

AUTHOR: Shing, Y.; *Folkman, J.*

CODEN: PIXXD2

PATENT NUMBER: WO 8908144

PATENT APPLICATION: US 00587 (880224)

PUBLICATION DATE: 8 Sep 1989 (890908) LANGUAGE: English

ABSTRACT: Methods are disclosed for separating, identifying and purifying various proteins such as fibroblast growth factors and plasminogen activators with a novel bi-affinity chromatography technique.

DESCRIPTORS: chromatography, bi-affinity; downstream processing; patents

CHEMICAL SUBSTANCE(S): fibroblast growth factors; plasminogen activator

SECTION: Pharmaceuticals (08)
